

XM is free enterprise at it's finest. I subscribe because I wanted something different, more variety. XM has created an innovative new product. The local traffic and weather channels are a important part of the programming that I pay for !! The FCC and / or the federal govenment should take a hands off approach and let the natural order of competitive markets run it's course. I remember this same argument between the cable television and satelite television a few years ago. The result of that has been a dramatic improvement in the quality and value of both Cable and Satelite TV. Please reject the NAB petition for the sake of a fair and equitable marketplace.
